Summary

With over 13 years of experience, I've evolved from a Principal Software Engineer to a leadership role as CTO. I am passionate about leveraging technology to revolutionize the travel and hospitality industry. I align my mission with the company's vision, striving to create innovative solutions that empower property owners and enhance customer experience. My expertise in project management and software development, combined with my dedication to fostering a culture of excellence, enables me to drive impactful changes within our B2C platform.

In my most recent project, I managed the development of the 'Become a Host' feature, a significant addition that allows users to list their properties directly on our application. This initiative not only expanded our service offerings but also provided a new income stream for our users. By utilizing my skills in jQuery, React Native, and Android platforms, I've contributed to creating a seamless and user-friendly interface that stands testament to our commitment to innovation and customer satisfaction.

Experience

BuuPass - Bus, Train & Flight bookings

Chief Technology Officer

October 2024 - Present (1 year 1 month)

Nairobi County, Kenya

Increased technological advancement by {25%} by leading strategy and operations at BuuPass.
